

CITY OF MAUMEE LAWN METER INSTALLATION

The following specification is suggested for use as a guideline. Each site is similar and each has some unique characteristics that will be adapted for that particular meter setting.

1. Have the water turned off at the street. Cut the line before the domestic meter and insert a tee fitting.
2. Place a valve on both sides of the lawn meter. The City of Maumee will furnish a spacer bar with tail pieces for the meter set.
